

Medical Straps

The health care industry has quickly become an expanding part of our business. TFI builds straps used in a wide variety of medical applications including trachea and fetal monitor straps, orthopedics, ambulance gurneys, hospital beds, and cable/tube management. Using our products, you can keep monitor cables neat & secure, fasten tubes to patient's beds and easily identify specific cables.

We have access to many different materials used in the medical field, such as stretchable Velcro® and foam laminates, as well as a multitude of molded plastic parts.

Using our clicking press and die cut machines, we can punch out complicated shapes from hook & loop, padded foam, neoprene, etc. Several of our customers ship us their custom molded parts and we add the straps.

If you are involved in this fast growing industry and need quality straps, please give us a call and let us work with you to create or improve your product.

We offer...

- **Made in the USA!**
- **Quick turn around**
- **Custom printing**
- **Strap fabrication**
- **Wide variety of sizes & styles**
- **Low Minimums**
